

# Hydro Seal

## Fact sheet

Hydro Seal is a unique range of multipurpose sealants which comprises of cementitious powders and activating chemicals. It is a watertight compound with filling properties which penetrates concrete and masonry units forming part of the structure.

- Hydro Sealant is a two-part waterproofing system. It incorporates a blend of cementitious powders, proprietary activating chemicals, quality aggregate fillers which is then mixed with the Hydro Bonding agent.
- Hydro Mix & Fix is a pre-blended, grey coloured, powder which is chemically formulated to give controlled high early strength properties. It is a repair material for concrete applications and pavements. It reaches adequate strength for traffic, normally within 1 hour and can be used at low ambient temperatures.
- Hydro Plast is a fibre and polymer modified cementitious mortar. Suitable for heavy duty plaster aerated concrete and cementitious structures repairs. Use ensures that repairs to new and old structures are waterproof and protected from further deterioration.
- Hydro Stop is a pre-mixed cementitious grey powder with accelerating chemicals which produce an instant setting repair compound to stop flowing water within 1-2 minutes in concrete water retaining structures.
