

Rhino Board

Fact sheet

A plasterboard that consists of an aerated or foamed gypsum core encased in, and firmly bonded to, special paper liners. It is used as lining/cladding for ceilings, drywalls and dry-lining being non-combustible and is used as a lining in fire-rated drywall and ceiling systems.

- The unprinted surface is the face, this should receive all decoration i.e. gypsum based plaster, paint, vinyl, etc.
- Do not decorate the printed surface.
- Do not expose standard Rhinoboard to water.
- It is not recommended for use in industrial kitchens and industrial bathrooms or any exterior applications.
